

Visibility on the corner

- Ms. Ogren submitted the following picture in her complaint to EPD showing the canal before the lot was cleared for construction.

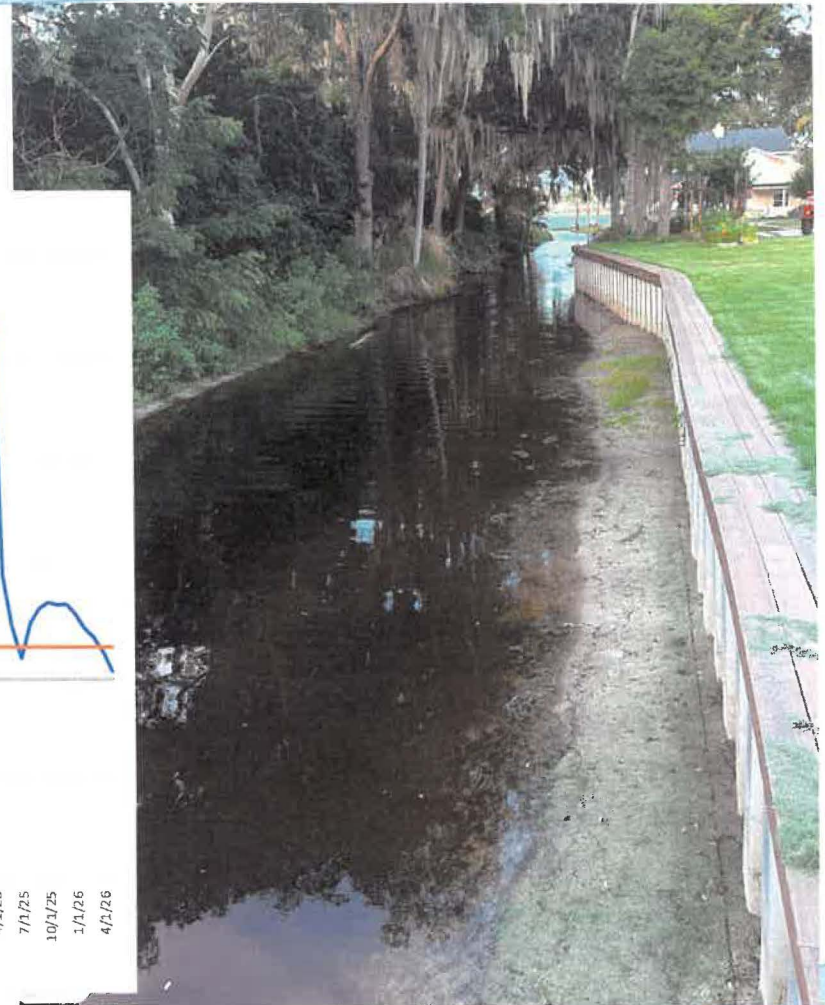

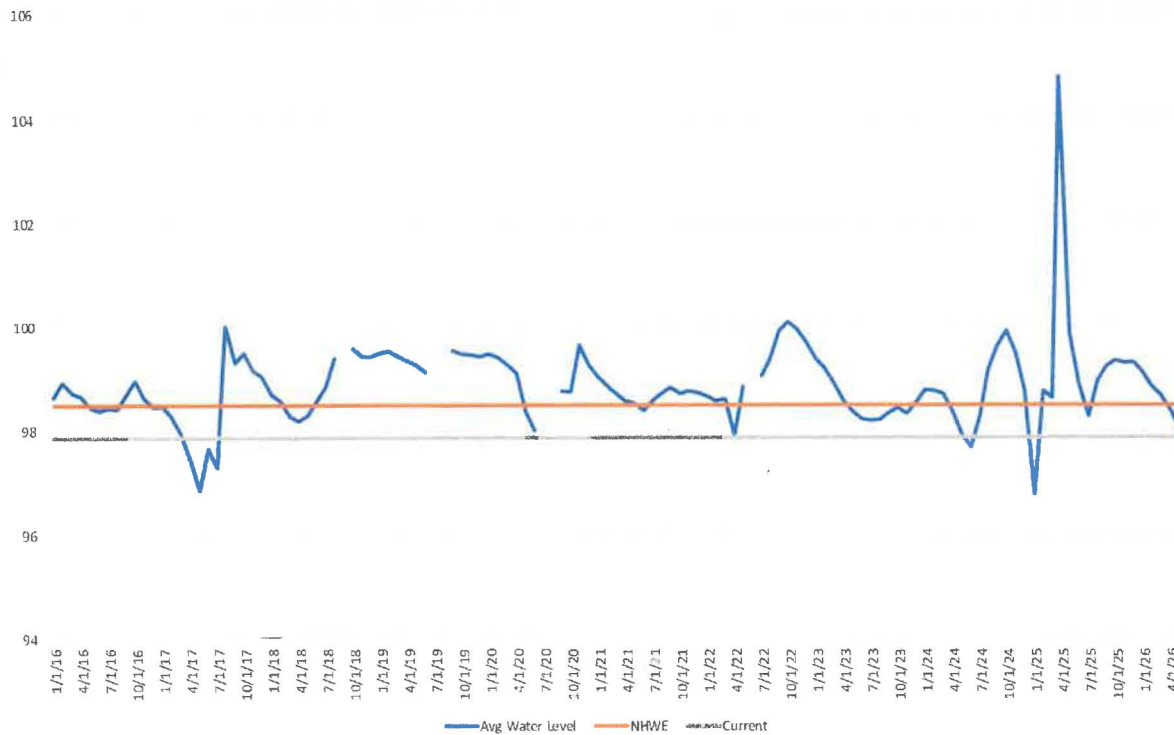

2013 – a view taken driving into the canal from Lake Butler – as you can see, it is very “Jungle like” and house in Water Stone have not been built nor the lot in Sandy HSores sold and cleared. Navigation could be challenging then.

Current Water level

71% of months with measurement are above NHWE

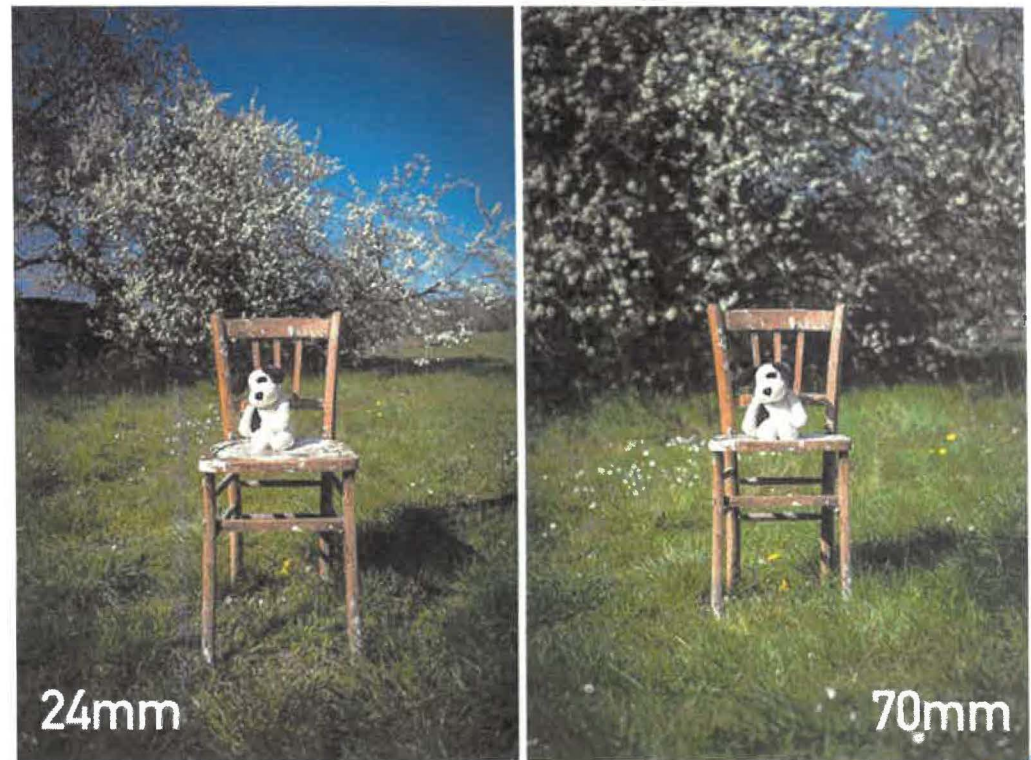

Lake Butler Water Level 2016-2026

Impact of Focal Length

- Measurements in images can be deceiving
- Focal Length = Calculation of an optical distance from the point where light rays converge to the digital sensor
- This picture was taken with different focal lengths making distance between the chair and bush look significantly different.
- Lens focal length changes the geometry of the scene
