SUBJECT: **May 2, 2023 – Work Session**  
**Stormwater Management -**  
**Moving Towards a Resilient Future (Session 1 of 2)**

At the October 25, 2022 Board meeting, Board members expressed stormwater management concerns including the intensity of future rainfall events, sufficiency of existing design standards and current maintenance standards. Following the discussion, Mayor Demings directed staff to do research and update the Board regarding potential modifications to our stormwater program and standards.

As a result, two stormwater management work sessions have been scheduled for the May 2, 2023 and May 23, 2023 Board meetings.

The first work session will review the impacts of the 2022 flooding events and will review the County's existing stormwater-related programs. This will include our design standards, basin studies, maintenance and inspection and capital improvement program. A preview of the second work session will also be provided as part of the initial work session.

This item is for informational purposes only. Board action is not required at this time.
