

Hello, my name is Kassandra, I am 11 years old.

I would like to talk to you about Split Oak being in danger of being damaged if not even destroyed!

We need to protect the environment before it's too late and Split Oak is a very important part of Florida's environment!

First they want to build a road through it, then they are going to build something else.

When will it stop? Never if you are not going to protect it!

You are hurting the environment, you are taking away an animal's home. What if somebody takes your home? It's like if you were kicked out of your house and had to live on the streets.

Split Oak needs to be protected. We need to think about nature, not just money.

Everybody seems to only care about money. Money is not important, nature is important. Florida is changing, they are building too many houses so that people will move here and pay them for the houses and again it is about money. And with all these houses you will need more roads. But we cannot keep destroying nature. Split Oak is an important piece of land. There are plants that you can only find in Split Oak and many special and old trees and a lot of different kinds of animals! You are building too many houses and roads in Florida. Split Oak shouldn't be suffering for the over building that's being allowed in Florida. It's not just about Split Oaks' animals and plants, it's about our lives. We need nature to live . And we need to tell developers that enough is enough!

Please make the right decision. Protect Split Oak!

Thank you!

A young voice to be heard!
